Patient Story

- **90 year old lady**
- **Background of dementia**
- **NIAS referral after fall and potential long lie**
- **Lives alone, once daily carers, stairs.**
- **Multidisciplinary team assessment and treatment:**
 - UTI treated
 - PT rehab so returned to stairs
 - SS and increased care package
 - Returned to usual activities

Feedback

Primary Care

- From a GP perspective working in the team, you can see the real benefit in being able to treat patients in their home environment... You can see first hand the value to patients of the enhanced and targeted care keeping them at home. As a GP it has also been a rewarding and invigorating experience collaborating with secondary care professionals'

Carer

- 'At a time when there has been criticism of the NHS, I have nothing but praise for this team of highly professional and firendly staff. My mother's mobility has improved and her pain control managed much better as a result of the team's treatment plan. This has given her back confidence with walking. I am so glad this team exists. SMALL TEAM, BIG DIFFERENCE.'

Service User

- 'My GP called on this team and it has been the best thing that I have ever imagined, the care is just second to none, their help for me is something I could never have dreamed of. A million thanks to them all.'
